

CLOUD SERVICES

CLOUD SERVICES BEYOND THE TREND

Improve business success through the latest cloud technologies.

Cloud solutions help enterprises take advantage of virtualisation, automation and service-oriented architectures to create a flexible and scalable pool of shared computing resources.

Become more agile and efficient with scale on-demand and charge-back systems, through a single unified portal to manage your entire physical, virtual and application infrastructure across Private, Public and Service Provider Clouds.

FINANCIAL ADVANTAGES THROUGH SUSTAINABLE (GREEN) COMPUTING

A hybrid infrastructure of Public and Private Cloud can maximise the use of computing resources and helps control investment in physical I.T. assets. Lowering capital expenditure on hardware and software, while reducing power usage and cooling requirements also helps to meet carbon reduction targets.

Our portfolio covers:

- Integrated reporting and cost centre charge-back features help emphasise the financial implications of computing resource utilisation, helping to eliminate unneeded Virtual Machines.
- Pay only for what you need and stay competitive with all the latest applications.
- Remove the uncertainty of spending large up-front capital costs on additional capacity that might never be used before it becomes outdated.

PRIVATE CLOUD, MANAGEMENT AND VIRTUALISATION DEPLOYMENT PLANNING SERVICES (PVDPS)

A PVDPS engagement can help customers:

- Optimise investments in System Centre, Windows Server and Hyper-V solutions.
- Understand the upgrade process, take advantage of the new virtualisation technology in Windows Server 2012 and create a detailed migration plan.
- Assess the current environment and develop a deployment plan for a Virtualisation and Management Solution.
- Understand if a Private Cloud makes sense for their organisation and develop a plan to deploy a Private Cloud infrastructure.

OPERATIONAL EFFICIENCY THROUGH AUTOMATION & INNOVATION

The automation of existing processes frees I.T. staff resources to become more proactive rather than reactive to user department requirements.

- I.T. emphasis becomes one of making sure the business has access to the IT services it needs.
- Microsoft Cloud Solutions are built on familiar, best-in-class products so your staff can tap into existing skill sets.

USER SATISFACTION THROUGH INCREASED AGILITY

A Private Cloud infrastructure builds on the benefits of virtualisation by adding new features to deliver I.T. services that reduce user reliance on I.T. staff.

- 24 hour self-service facilities for user departments to self-provision and launch new applications and virtual machines (VM) within minutes.
- User departments can scale the computing resources for their VMs. For example, if a new server application needs more (or less) storage, memory, CPU cycles and so on, the VM owner can scale those resources on demand.
- Service specific dashboards and management portals control or prevent problems caused when staff has access to sensitive data or system controls.

FULL RANGE OF HOSTED SERVICES TO SAVE MONEY AND TIME

Even though hardware costs have generally fallen over the last few years, it can still be a very expensive exercise to set-up a high specification server to look after your website, e-mail or business applications such as CRM. As a result, more organisations are looking to have their services hosted externally in the "Cloud" as this provides a very cost-effective alternative.

We provide a wide range of hosted services from our secure data centres which are located in the UK. From basic Web-hosting and fully-managed dedicated servers, right through to hosted email, data and backup, we have the expertise to help you really succeed and work anywhere.

“WEM’s Virtualisation knowledge has allowed us to consolidate our servers and save rack space, protecting our investment in older software by improving its performance and helped our business continuity plans by allowing us to mount core servers on any other hardware.”

ABOUT WEM TECHNOLOGY

Wem Technology is part of a group of companies that together specialise in business development and support through technology that’s way beyond the trend.

Our ethos is to apply our skill and expertise to all your technology needs, so you’re free to focus on running your business.

CONTACT WEM TECHNOLOGY

For more information about how Wem Technology can help with your Cloud Services and hosting requirements, contact:
