NETWORKS BEYOND THE TREND

Robust, well-designed, faster networks with a stable foundation for all your essential applications.

THE RIGHT NETWORK FOR BUSINESS SUCCESS

As a business owner you don't want to spend your time researching and viewing network solutions. What is required is a partner who can bring their knowledge and experience to deliver you the network infrastructure that is right for your business.

The right network infrastructure is a vital tool that enables organisations to increase operational efficiency, reach new markets and improve customer service. A well designed network that is properly installed and supported can continue to evolve and support the business going forward.

Even for a small business, implementing an IT network can be a complex task. With such a wide variety of solutions now available, knowing which one is right for your needs requires extensive technical and market knowledge.

SECURE INTEGRATED SOLUTIONS

Wem Technology offers a range of network infrastructure solutions that will provide you with a secure and integrated network platform on which you can depend. We will analyse your business requirements and provide you with a solution that will meet your technology needs for now and the future.

Based on market-leading technologies our solutions include:

• Microsoft Windows Small Business Server
• Server Virtualisation
• Backup Solutions
• Business Continuity
• Remote Working

We will work with you to plan installations and stage implementations of new systems so that potential disruption can be reduced and staff acceptance is encouraged.

REDUCE COSTS AND GO GREEN WITH SERVER VIRTUALISATION

Virtualisation is now a mature and stable technology. Its implementation will enable an organisation to lower hardware, IT support and power costs as well as help reduce carbon emissions. We have partnered with the leading virtualisation technology manufacturers enabling us to offer solutions from both Microsoft and VMware.

Our expert team have undertaken multiple projects for clients which have involved the virtualisation of legacy servers running important business applications. In all cases this has resulted in better performance and greater confidence that these older systems can continue to run for several more years.

CLOUD COMPUTING – COMPUTING RESOURCES WHEN AND WHERE YOU NEED THEM

Cloud Computing is an evolutionary concept that is revolutionising the way businesses provide computing facilities to employees. Powerful centralised computing infrastructures can be provided on-demand via the Internet to give:

- Resiliency - No single point of hardware failure.
- Scalability - Business can expand or contract the computing power as needed.
- Flexibility - The internet will allow users to connect regardless of their location.
- Security - Instant disaster recovery and the ability for secure remote working.
- Efficiency- Workstations are cheaper, last longer and use less electricity.
- Productivity – All the latest software is included so you don't pay for upgrades.

Ideal for start-up companies or those renewing their servers, Cloud Computing reduces the upfront costs of a system and allows you to continue to match expenses more closely to your revenues.

DATA BACKUP & RESTORE, DISASTER RECOVERY, AND BUSINESS CONTINUITY

Every organisation needs a data storage and backup strategy to protect against unplanned events that cause data loss and system failure. Implementing such a strategy can be time-consuming and expensive if not carried out correctly by specialist professionals.

Strategic partnerships enable us to offer an integrated, unrivalled range of backup solutions designed to meet every need together with a reliable package for Data Backup & Restore, Disaster Recovery, and Business Continuity that includes:

- Continuous data protection - transparent backups that allow easy recovery of files and folders
- Fast recovery of entire servers and all data in the event of a system failure
- Offsite duplication to ensure recovery from a local disaster or complete site failure

REMOTE WORKING

All types of businesses now realise that providing remote access to the company computer network to all employees has many benefits:

- Increased productivity
- Improved staff morale and retention
- Reduced costs and office space requirements

- Lower carbon footprint
- Staff remain productive if prevented from getting in to the office

Our extensive expertise in branch networks, Cloud Computing and telephony will help you make the right choice's to seamlessly integrate your remote workers into the company network with maximum security.

ABOUT WEM TECHNOLOGY

Wem Technology is part of a group of companies that together specialise in business development and support through technology that's way beyond the trend.

Our ethos is to apply our skill and expertise to all your technology needs, so you're free to focus on running your business.
