## **West London Microsoft Partner Joins the Microsoft Cloud Solution Provider (CSP) Program at 1-Tier Level**

30 August 2016 London, UK

Wem Technology, a leading West and Central London Managed Service IT provider, has announced that its cloud service offering is to be expanded after being invited to join Microsoft's Cloud Solution Provider (CSP) Program at the 1-Tier level. Good news for companies looking for improved, flexible, secure IT without the capital costs or long-term contractual commitments.

Managing Director Vin Jauhal comments that this is a "*natural progression for Wem Technology as a Microsoft Gold Partner that has been at the forefront of cloud technical developments over the last 10 years.*"

Central to Wem Technology's philosophy is the need to minimise disruption to customer's businesses by gradually helping them through the digital and infrastructure changes required for flexible working.

Helping organisations to meet their objectives, Wem Technology recognises that every business is different and each cloud deployment needs to be tailored from elements that make the overall solution unique to the customer.

Infrastructure elements provided by Microsoft Azure, Wem's Technology's UK datacentres, or at the customer's premises are combined and implemented by MCSE Private Cloud-qualified engineers and IT design experts to provide true Private Clouds built to enterprise-level requirements.

*"Being part of the Microsoft CSP program expands the Cloud choices for our customers to include Microsoft Azure, Office365, Enterprise Mobility Suite and Intune, and allows us to deliver essential services such as planning, integration and ongoing management"* Vin Jauhal

The Microsoft Cloud Solution Provider (CSP) Program allows Wem Technology to provide the full lifecycle that customers require, from Planning and Provisioning, right through to Integration, Billing and Support.
