

Awingu.com

One Workspace. Any Device. Anywhere.

Do you need access to legacy, proprietary, office and web applications? Are you using a private, a hybrid or a public cloud? Awingu does it all, wherever you are and whichever device you are using: PC, Mac, tablet, smartphone or Chromebook. You just need a browser. That's all.

We offer all your applications and files in [one workspace](#)

In such a complex world, why make work more difficult than it should be? Choose a workspace that is completely in line with the new ways of working and collaborating: any time, any place and on any device.

Unlike any other solution in the market, Awingu offers simple, reliable, secure and worry-free access to all your files and applications: all this without any client software installation.

Simplicity²

Just like you, we like to keep things simple. For your **users** and your **IT team**.

The very same connected, uniform and intuitive portal **allows your users to navigate** between all their files and applications. They can easily **switch and share sessions** between devices and colleagues. Working on the move and collaborating was never this easy.

Your **IT team** will enjoy Awingu's simple approach just as much: it is the **only all-access workspace** that can be deployed out-of-the-box in **just 1 day**. It is simple to manage, maintain and control. It has an intuitive admin console, **offering extensive usage insights and auditing tools**. Managing full access workspaces was never this easy.

Always on

These are connected times. So why keep your workspaces local? Awingu has a true 'digital native' vision on working. **We use the web**. This means **there is no client software installation, no maintenance or no configuration**. And it enables geo-localisation and superb video-viewing quality. This is how the connected generation wants to work: nimble, fast and easy.

Safety first

Awingu keeps everything safe where you want it: SSL-encrypted, password protected, controlled and auditable.

The choice is yours to use your device merely as a portal and avoid any data footprint on the client device itself. That way, confidential data and high-value intellectual property is available anywhere while being kept safe inside the company. No more IT security nightmares, ever.

All access

- Any file
- Any application
- Any device
- On any Operating System
- On any browser
- On any type of cloud

- Geo-localisation
- Local printing
- Optimized video streaming

Secure

- No local file footprint
- No theft of intellectual property
- No breach of confidentiality
- Managed environment
- Session auditing

Leaping to a new company culture

In the 'New World of Work' (NWOW) culture, **today's professionals prefer to use their own devices**, without being restricted by old office IT policies. They **are highly mobile**. They **want to be able to work from anywhere**. They **expect access to all their files and applications**. On top of that, the increasing use of contractor workforces creates the need for a fast and smooth on-boarding while keeping costs and liabilities under control.

Awingu has a smart, simple and safe answer to all of these challenges: from evolving to a NWOW to facilitating Bring Your Own Device (BYOD) policies in a secure and manageable way.

Awingu enables

Awingu leads the way to a new working approach, driven by fluent information sharing, close collaboration and mobility. When the gap between your architecture and the cloud seems too wide, Awingu helps you take the first step. When it is time for a PC refresh cycle, Awingu allows you to save costs while switching to a new generation of cutting-edge, lightweight and user-friendlier client devices.

Offering a new and fresh perspective on workspaces, **Awingu is more than just a tool. We enable one workspace, anywhere, on any device.**
